

Even though the pollen is viable and abundant, is fertilization really taking place?

FRUIT SET: Effect of Nutri-Cal on Almond Pollination

"Research has proven that pollen tube growth is dependent on the presence of calcium in the substrate, and the direction of its growth is chemotropically controlled by the extracellular calcium gradient."
(Mascarenhas and Machlis, 1964, Plant Physiol. 39, 70-77)

"Multiple applications of Nutri-Cal strengthens and toughens almond leaf tissue to aid in the resistance of disease and stress"
